

AIM

ARMSTRONG'S INTELLIGENT MONITORING SYSTEMS

www.aimalert.com

What can happen in a matter of seconds?

In a matter of seconds your RV, boat or trailer can be subjected to vandalism, theft, arson and other unforeseen intrusion. When an event happens, the AIM jumps into action, waking up all necessary devices. This data is sent immediately to our notification center.

The notification Center will send this information directly to your cell phone, PDA, e-mail or can be brought up to our operators who can make verbal communication to notify you, or a contact person of the event taking place on your RV, boat, or trailer.

Accessing your information

With AIM's internet access you can log on to your system to view reports, and the current status of your system from any internet capable computer or pocket PC!

Reports can be sent to your e-mail daily of any events that occurred in the last 24 hours
