Enterprise Monitoring

Innovative Tools You Can Access at No Cost

Maximize Recurring Monthly Revenue

Our powerful dealer dashboard was created to help maximize your RMR. Dashboard insights can help you minimize attrition, improve monitoring efficiencies, and capitalize on service opportunities.

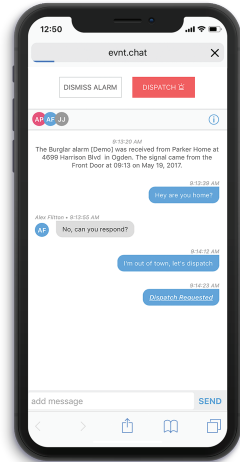

Easy Account Management

Armstrongs exclusive mobile technician app was developed to let you manage and test accounts conveniently from your phone – anywhere, anytime. It also lets you quickly view your most recently tested accounts and even locate your accounts through our Google Maps integration to save you time and resources.

Reduce False Dispatches

Our award-winning alarm validation service, Armstrongs Chat, allows subscribers to quickly confirm or disregard alarm signals. When a signal comes in, the customer's secure chat group immediately receives a text message and can chat with one another to determine whether dispatch is needed. The result is better communication, more informed decision making, reduced false dispatches, and most importantly, faster emergency response times.

Minimize Subscriber Turnover

Our robust MLS Reporting Tool helps you minimize subscriber turnover and gain new accounts. It shows when any of your customers list their property for sale so you can proactively contact them before they sell and possibly retain them as a customer in their new home. It also shows when houses have been recently purchased, giving you a head start on connecting with the new residents.

Streamline Processes

Armstrongs offers a variety of turn-key integrations with key vendors like Alarm.com, Stages, and other industry-leading providers of video surveillance, CRMs, billing and additional business management services.
